SUMMARY

Data Analyst skilled in SQL, Advanced Excel (Pivot Tables, VLOOKUP), Power BI, and Tableau for data analysis, data cleaning, and data visualization. Experienced in exploratory data analysis, dashboard development, and business intelligence reporting to support data driven decision making. Proven ability in business analysis, data validation, and problem solving delivering actionable insights across A/B testing, customer churn, and financial analytics projects. Seeking an entry level Data Analyst or Business Analyst role.

SKILLS

Data Visualization: Tableau, Power BI, Looker Studio, Dashboard Development
Tools & Platforms: MS Excel (Pivot Tables, VLOOKUP), SQL, Google Sheets
Analytics & Modeling: Data Cleaning, Exploratory Data Analysis (EDA), Data Storytelling
Soft Skills: Data Storytelling, Problem Solving, Communication, Collaborative

INTERNSHIP

GenAI Powered Data Analytics Jul 25
TATA Consultancy Services

- Analyzed business datasets using Generative AI techniques to enhance data driven decision making.
- Leveraged AI powered tools to summarize datasets and extract analytical insights efficiently.
- Designed a structured framework for integrating GenAI into analytics workflows.

Data Analytics Feb 25
Deloitte

- Examined large financial datasets for a banking client to evaluate business performance metrics.
- Conducted data driven problem analysis to support credit and operational decision making.
- Created analytical reports and visualizations to communicate insights to stakeholders.

Data Analytics & Visualization Jan 25
Accenture North America

- Cleaned, modeled, and investigated client data using Excel to identify engagement trends.
- Developed interactive Power BI dashboards to present insights and business opportunities.
- Delivered actionable recommendations based on exploratory and trend analysis.

PROJECTS

Global Layoffs Analysis | SQL & Power BI | github.com/ishwariwankhade25/global-layoffs-eda-sql-power-bi-analysis

- Cleaned and transformed raw layoffs data using SQL (removed duplicates, standardized fields, handled nulls, converted data types).
- Performed EDA using aggregations and window functions (ROW_NUMBER, DENSE_RANK) to analyze trends across companies, industries, and years.
- Built interactive Power BI dashboard with KPIs and filters, analyzing 350K+ layoffs across 1,000+ companies to identify key patterns.

A/B Experiment Analysis | SQL, Power BI, Excel | github.com/ishwariwankhade25/ab-experiment-analysis-excel-sql-power-bi

- Evaluated an AI powered search feature by analyzing an A/B experiment dataset to measure impact on Click Through Rate (CTR) and session duration.
- Wrote SQL queries to aggregate user clicks & engagement metrics; developed a Power BI dashboard featuring dynamic filters for device type and referral sources.
- Determined a +60.41% CTR uplift in the experiment group with neutral impact on session duration, providing a data-backed recommendation for a full feature rollout.

Customer Churn Analysis | Google Sheets, Looker Studio | github.com/ishwariwankhade25/customer-churn-analysis-google-sheets-looker-studio

- Analyzed a dataset of 7,043 customers to identify churn drivers impacting $139K in recurring revenue.
- Performed feature engineering in Google Sheets to create tenure groups and charge segments, then visualized findings via an interactive Looker Studio dashboard.
- Identified that month-to-month contracts and new customers drove a 26.54% churn rate, leading to recommendations for long term contract incentives and onboarding improvements.
